Product Name: Data Acquisition Module UNO R3 Data Logging Shield Data Recorder Module For Arduino

Product Description:

1. SD card FAT16 or FAT32 format and interface card. 3.3 pegelumsetzer V circuit to prevent damage to the SD card.

2. Real time clock (RTC) holding time, even if there is no connection. Battery backup takes many years.

3. With the sample code and Library and RTC and SD, let you quickly get started. Soldering joint forming area, circuit or sensor.

4. The onboard controller is a 3.3V voltage reference and reliable operation of the SD card, the need for high-power operation.

5.Dimensions (approximately): 68x52x19mm.

6.Reglerspannung:3.3 V.

7.Batterie: CR1220 3V (not included).

8.Net Weight: 22 g.
